     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                              Score

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 4640
LENGTH: 718
TYPE: PRT
ORGANISM: Acinetobacter baumannii
US-09-328-352-4640
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş

1,Pathway: pullulan degradation
1,Pathway: pullulan degradation
1,Note: also has alpha-amylase activity
2,Superfamily: neopullulanase; alpha-amylase core homology
2,Keywords: glycosidase; hydrolase; polysaccharide degradation
1,293-424/Domain: alpha-amylase core homology <AMY>
1,293-424/Active site: Glu, Glu, Asp #status predicted
                                               hypothetical protein Y75B8A.22 - Caenorhabditis elegans C;Species: Caenorhabditis elegans C;Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #tex
